Regarding claim 1, Bhoj discloses a method comprising steps of defining a set of parameters to be measured (cols. 5-6 lines 65-34 and col. 7 lines 22-38); defining acceptance levels for each of parameters in said set of parameters (see col. 6 lines 35-61); collecting real-time information related to measurement of said parameters (see col. 11 lines 24-40 and col. 15 lines 7-18); comparing said acceptance levels to said real-time information (see col. 11 lines 41-54); and generating report (see col. 14 lines 39-44 and col. 15 lines 25-30).

Regarding claim 9, Bhoj discloses a method comprising steps of defining classes of back-end servers (see fig. 2, NEWS SERVERS, E-MAIL SERVERS, WEB SERVER FARM) (see col. 7 lines 14-21); selecting a set of service parameters to be monitored (see col. 12 lines 61-67); creating a database of monitored service parameters (see cols. 11 lines 5-6); and preparing reports and/or alarms (see col. 14 lines 39-44 and col. 15 lines 25-30).

Regarding claim 2, Bhoj discloses providing a format in which a set of servers will provide information to be measured (see cols. 9-10 lines 62-7); and implementing means for collecting said information (see col. 11 lines 29-35).

Regarding claim 3, Bhoj discloses generating a database entry for each service commitment element of a service level agreement (see cols. 11-12 lines 66-6).

Art Unit: 2155

Regarding claims 4 and 12, Bhoj discloses the set of parameters to be measured is selected from the set consisting of records of performance, transactions, errors, client IP address, username, date, time, service, server name, server IP address, processing time, bytes sent, bytes received, service status, operation, target URL, User Agent, referrer parameters, and cookie (see cols. 8-9 lines 38-24).

Regarding claims 5 and 13, Bhoj discloses the real-time information collected further includes information selected from the group consisting of assigned disk space, that the user can access, how the user's request is fulfilled within the system or web farm, user's subscribed level of service or class, transaction, number of requests, download size, file size, file type, time of day, week or month, response time of the back end servers, response time of the web farm, and how long it takes to complete a specified request or file (see col. 9 lines 25-52).

Regarding claim 10, Bhoj discloses a graphical user interface (see fig. 10, col. 14 lines 39-44).

Regarding claim 11, Bhoj discloses preparing reports and /alarms (see col. 15 lines 25-34).

Regarding claim 14, service-level commitments include metrics (see col. 13 lines 15-19).

Regarding claims 15 and 16, Bhoj discloses defining classes of back-end servers (see fig. 2, NEWS SERVERS, E-MAIL SERVERS, WEB SERVER FARM) (see col. 7 lines 14-21).

Art Unit: 2155

4. Claims 6-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Fletcher et al (Fletcher) (USPN 6,269,401).

Regarding claim 6, Fletcher discloses an apparatus comprising a web-site comprising at least one back-end server (see fig. 3 col. 6 lines 26-34) and reporter (see abstract); a network (see col. 6 lines 26-55); a collection processor measuring and collecting a set of defined parameters (see cols. 6-8 lines 56-56); a monitoring processor determining which of said collected parameters exceed a corresponding acceptance level (see col. 25 lines 27-39); and a reporting process that produces a report results of said monitoring processor (see col. 25 lines 27-37).

Regarding claim 7, Fletcher teaches monitoring a set of defined parameters and logging them into respective log files (see col. 6 lines 40-43); scheduler triggering said reporter to begin collection of log files from a list of back-end server (see col. 8 lines 7-35); an accumulator requesting log files from the intelligent agent of each listed back-end server and consolidating the log files into a database (see cols 24-25 lines 51-26); an interface mechanism between said accumulator and each of intelligent agent (see col. , said interface mechanism ensuring that each requested log file is completely transferred to the accumulator prior to starting consolidation (see col. 25 lines 3-26).

Regarding claim 8, Fletcher teaches keeps track of which portions of said log files have been transferred (see col. 24 lines 29-50).
